Spatial Prioritization Invasive Species Early Detection and Management Efforts

NYGeoCon 2017

1. Introduction to iMap Invasives
2. Development of the Spatial Prioritization Model
3. Using the model and iMap in municipal invasives management

Amy Conley

amy.conley@dec.ny.gov

Emily Caboot

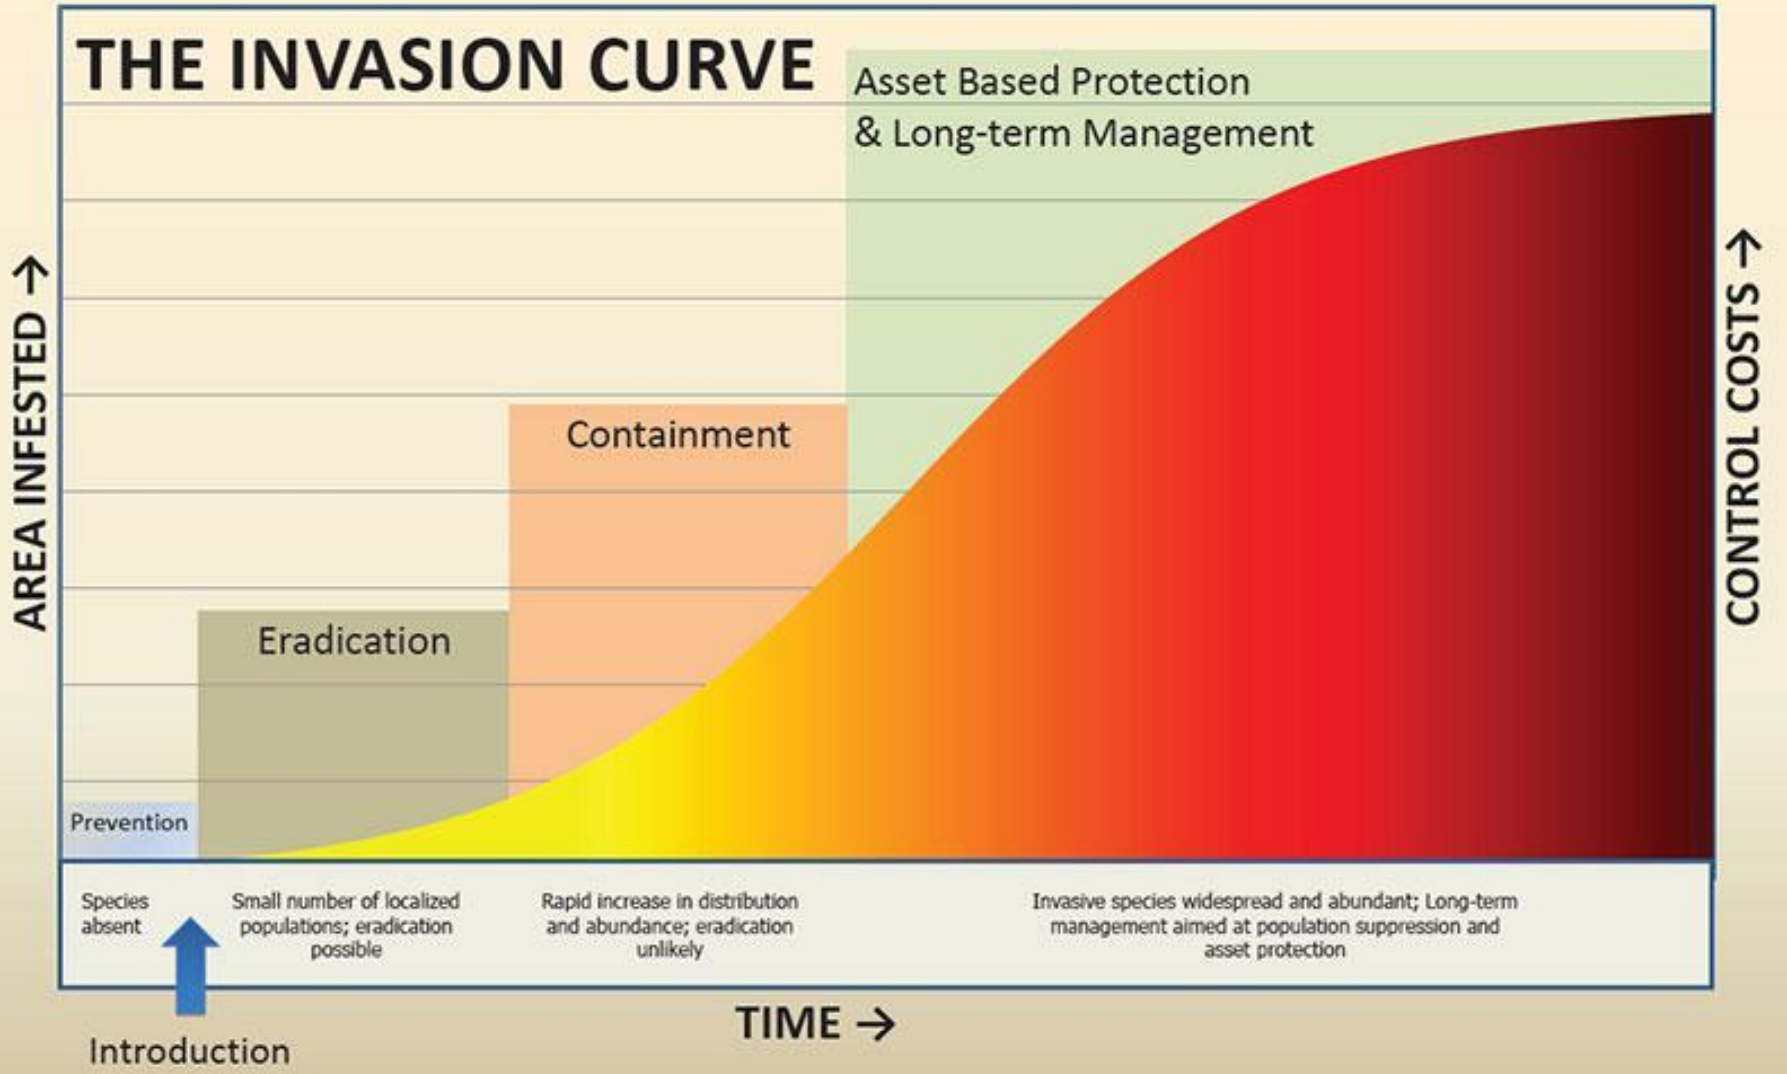

ecaboot@albany.edu

What is an Invasive Species?

Non-native species that can cause harm to the environment, the economy or to human health. Invasives come from all around the world.

THE INVASION CURVE

AREA INFESTED →

CONTROL COSTS →

TIME →

Species absent

Small number of localized populations; eradication possible

Rapid increase in distribution and abundance; eradication unlikely

Invasive species widespread and abundant; Long-term management aimed at population suppression and asset protection

Introduction

New York State Invasive Species Database

A collaborative GIS-based,
online tool for invasive
species management

Funding provided by:
**New York State
Environmental Protection Fund**

Kenneth R. Law, USDA APHIS PPQ, Bugwood.org

Further Species Information

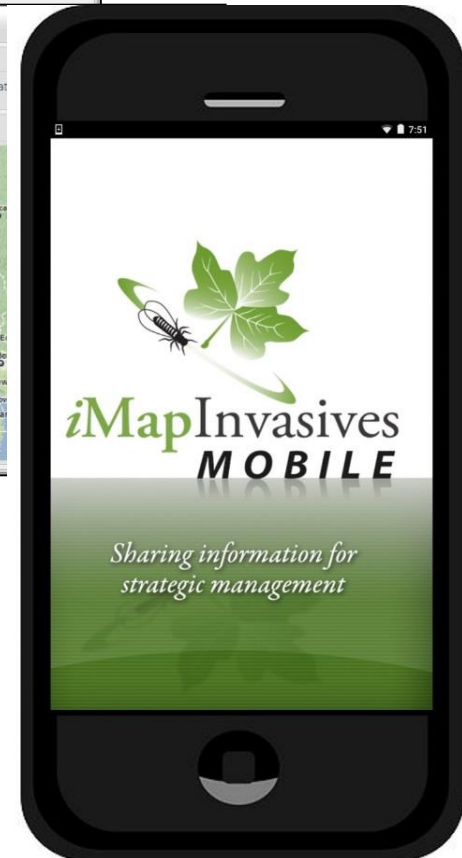

Step 5 Where

Coordinate System
Lat/Lon Decimal

Enter Coordinate
Longitude: -73.93833

Drag Map to Update Location

DATA TYPES

OBSERVATION – location of a specific species (location, date)

ASSESSMENT – detailed information about a specific observation

TREATMENT – control effort details

SURVEY – search for presence or absence of a species

INFESTATION
MANAGEMENT
RECORD

As the database grows...

- Early detection capacity increases
- Understand patterns/ pathways of invasion
- More strategic management decisions

Spatial Prioritization Maps for Invasive Species

GOAL - Help Natural Resource Managers prioritize where to focus resources for Early Detection surveys and invasive species control by coupling conservation value and risk of spread.

Basic Steps:

- 1) Compiled spatial data on factors influencing invasive control decisions
 - Used layers with statewide coverage and fine scale resolution
- 2) Created new synthesis layers
 - Driven by stakeholder feedback and expected uses

Conservation value

Protection Status

Risk of Spread

Comprehensive Score: Ecological Significance + Protected or Natural + Risk

Ecological Significance

Protected or Natural

Risk of Spread

Comprehensive Score

Areas of high conservation value with high risk of new invasions and dispersal

Developing a Spatial Prioritization Tool

Where is the most valuable habitat under the greatest threat?

The model assessed habitat quality in three categories:

Ecological Significance

Risk of Spread

Protected Status

Ecological Significance

Component

Weight

Element Occurrence Data

Mussel Data

5

BAP

5

Risk of Spread

Component

Weight

Landscape Condition Assessment	35
Trails	5
Campgrounds	5
Boat Launches	5

Landscape Condition Assessment

Collect anthropogenic themes that are related to ecosystem stress (transportation, development, utilities)

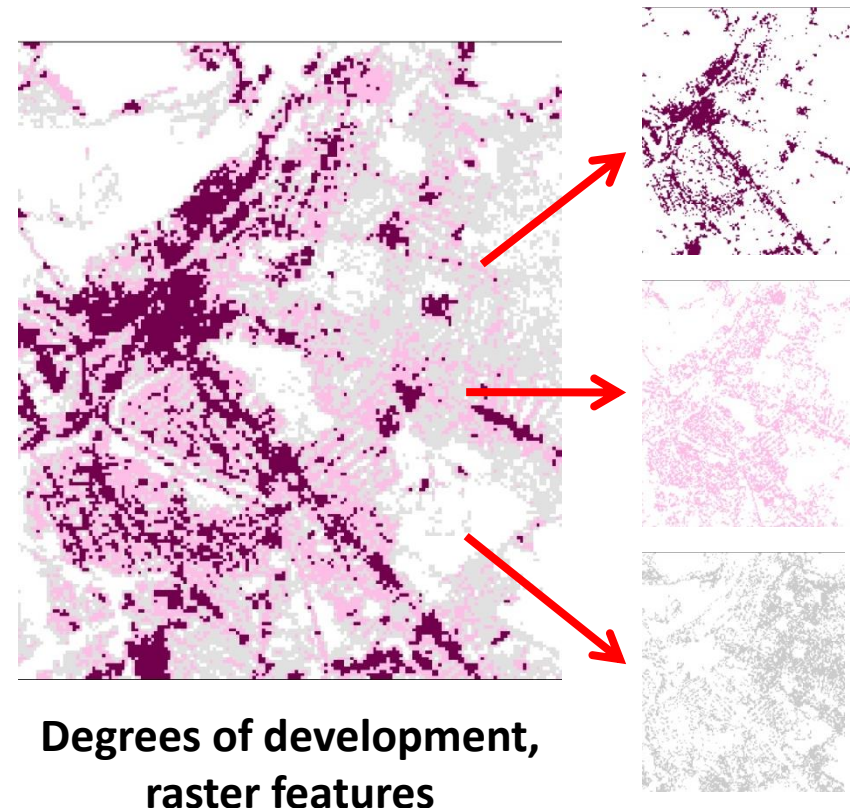

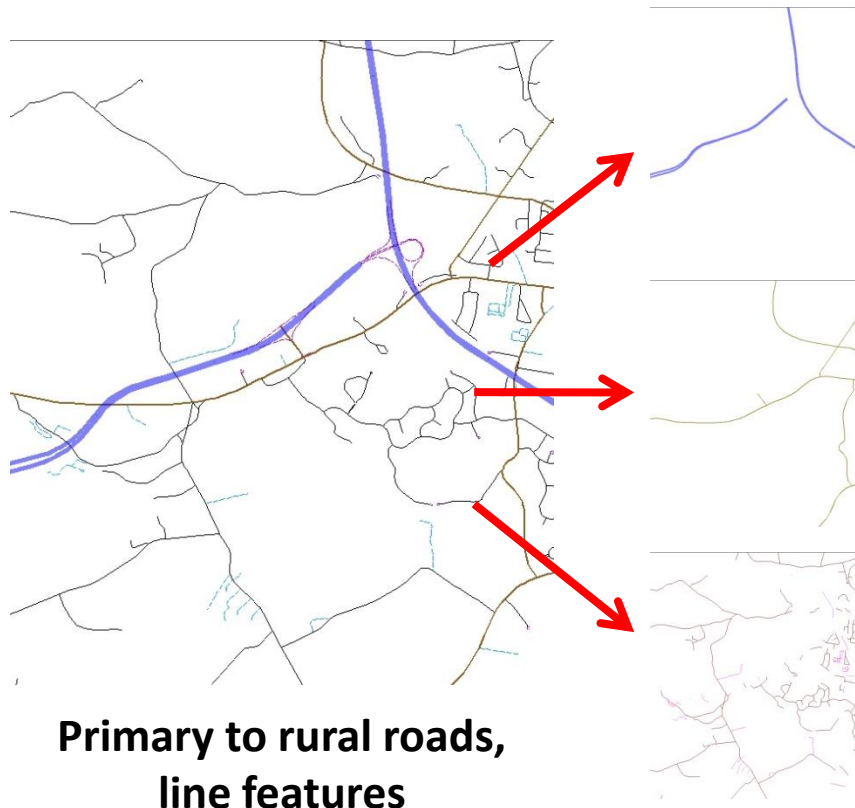

**Primary to rural roads,
line features**

**Degrees of development,
raster features**

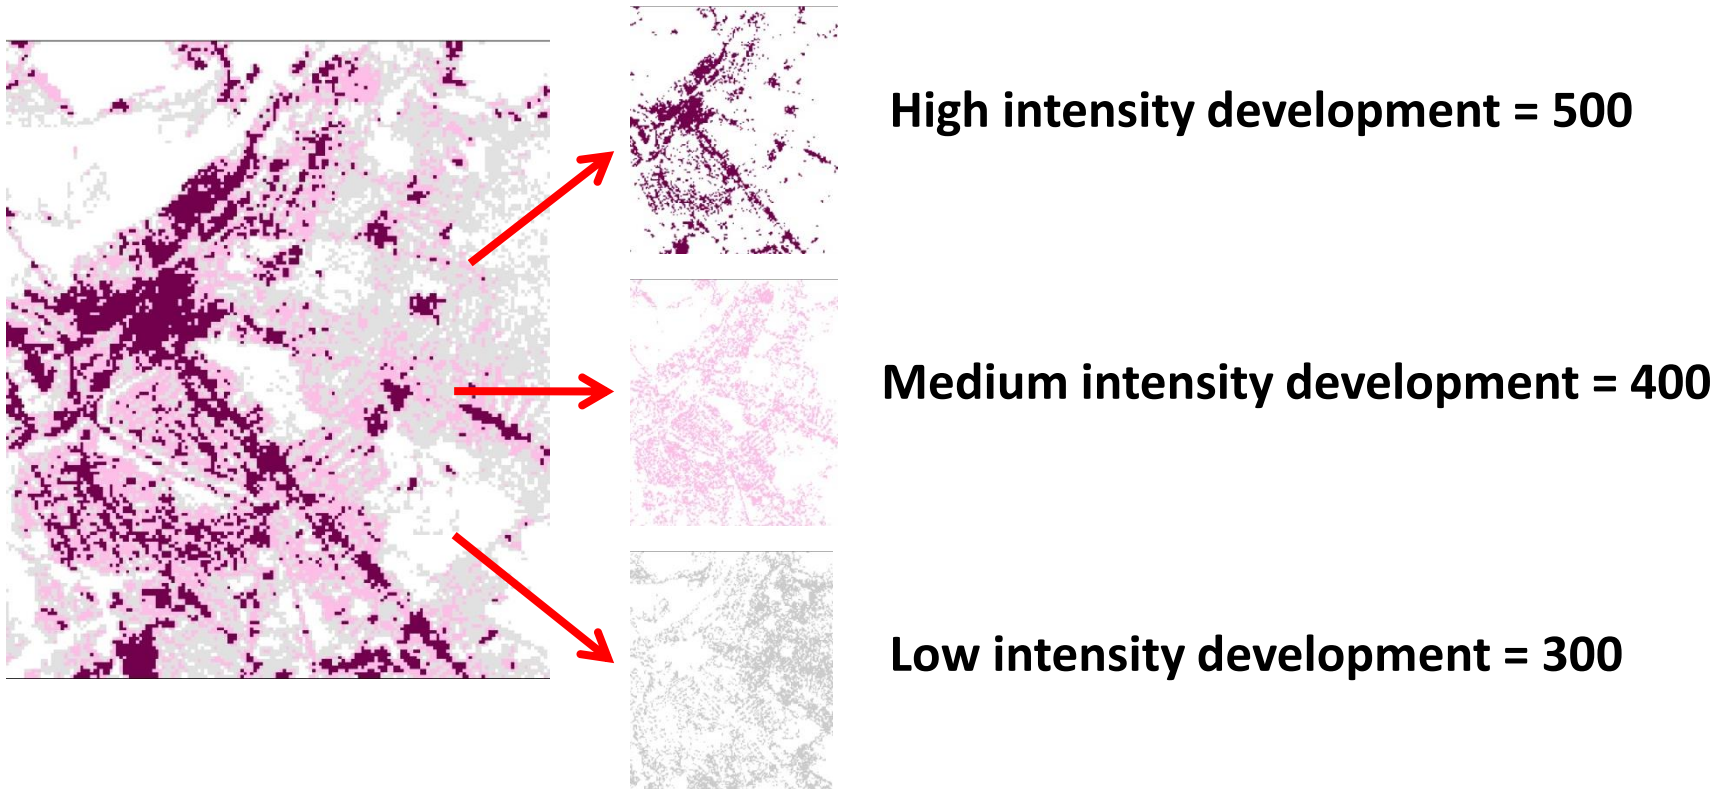

Landscape Condition Assessment

Collect anthropogenic themes that are related to ecosystem stress (transportation, development, utilities)

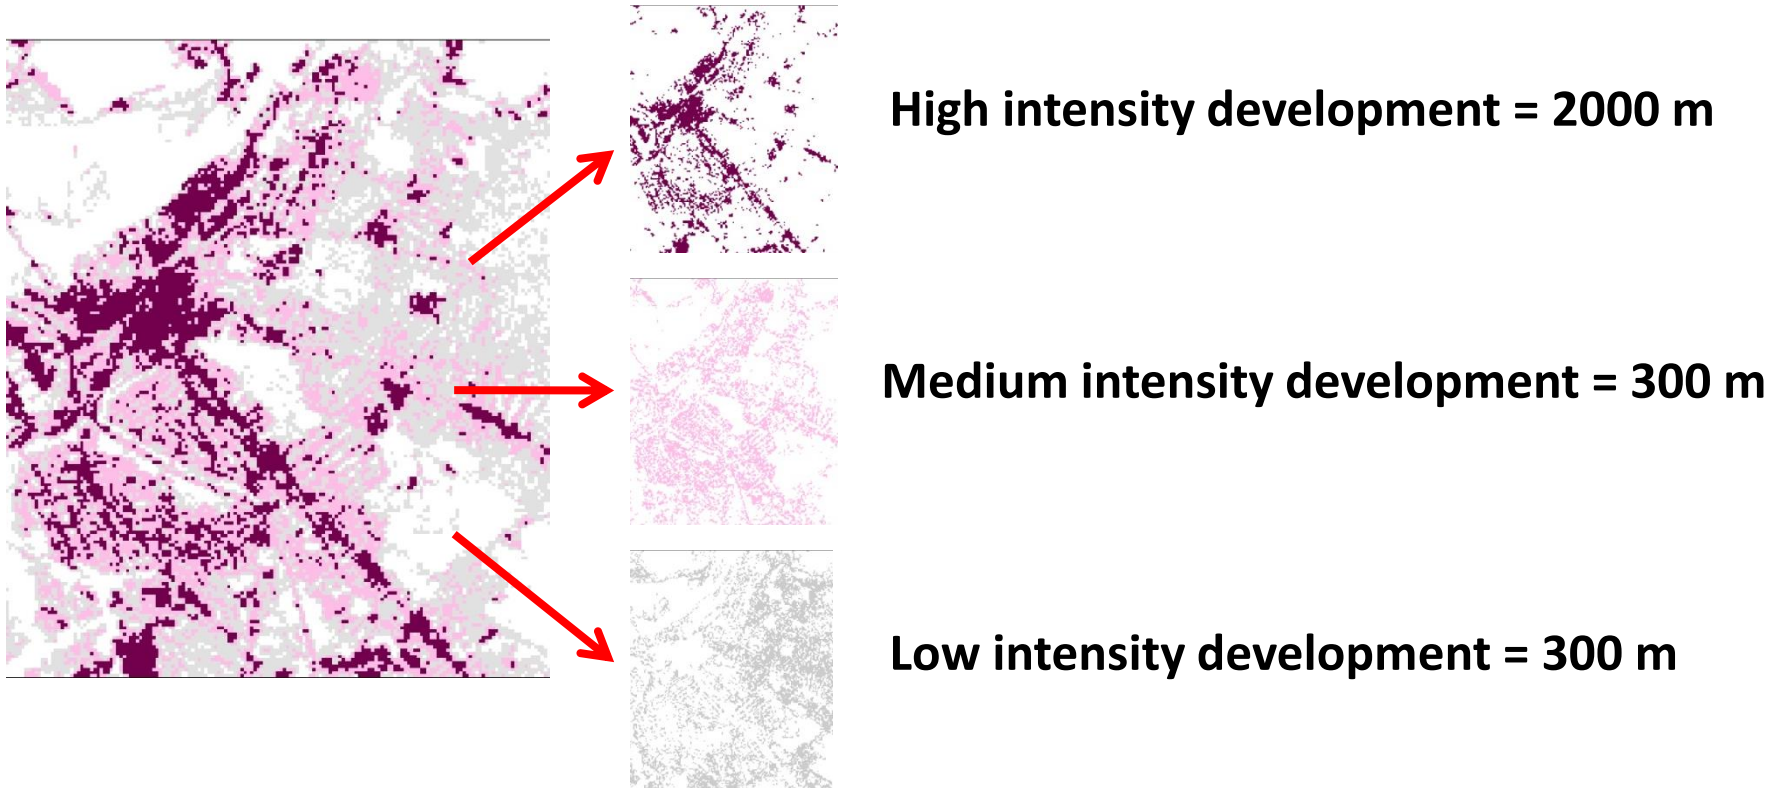

Landscape Condition Assessment

Assign relative impact scores (weights) to each stressor

Landscape Condition Assessment

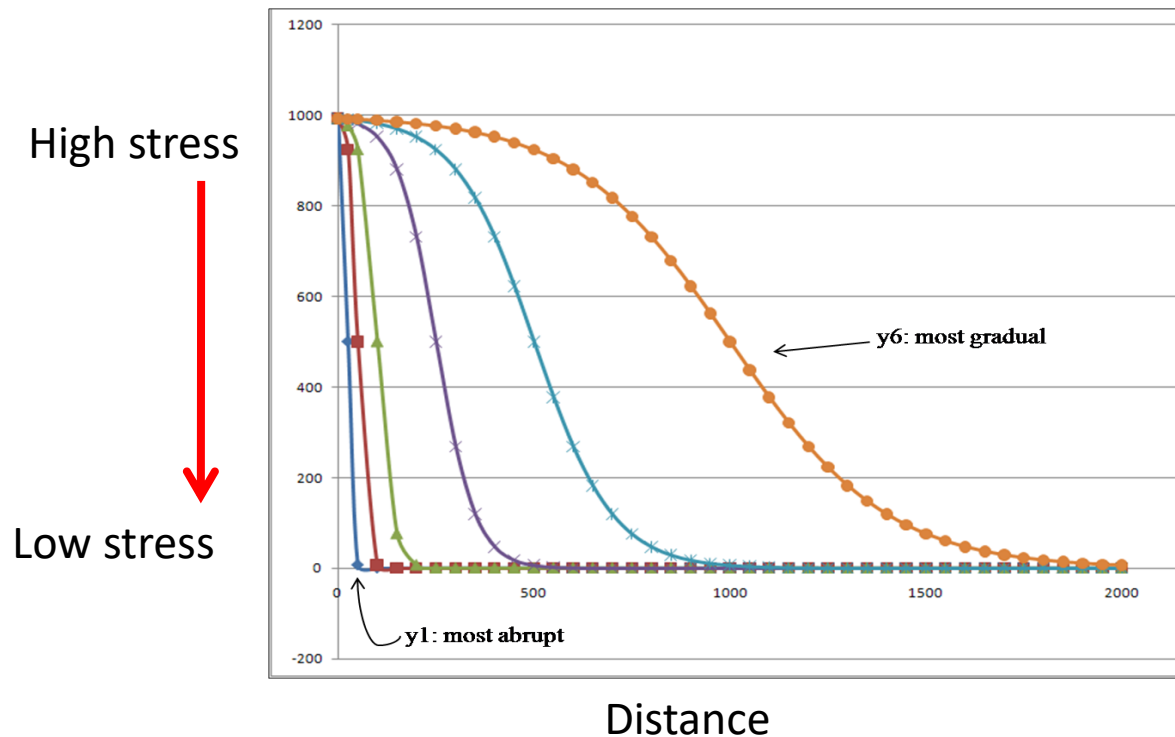

Assign distance at which impact decreases to zero

Landscape Condition Assessment

Model attenuation of disturbance effects away from stressors

sigmoidal decay model

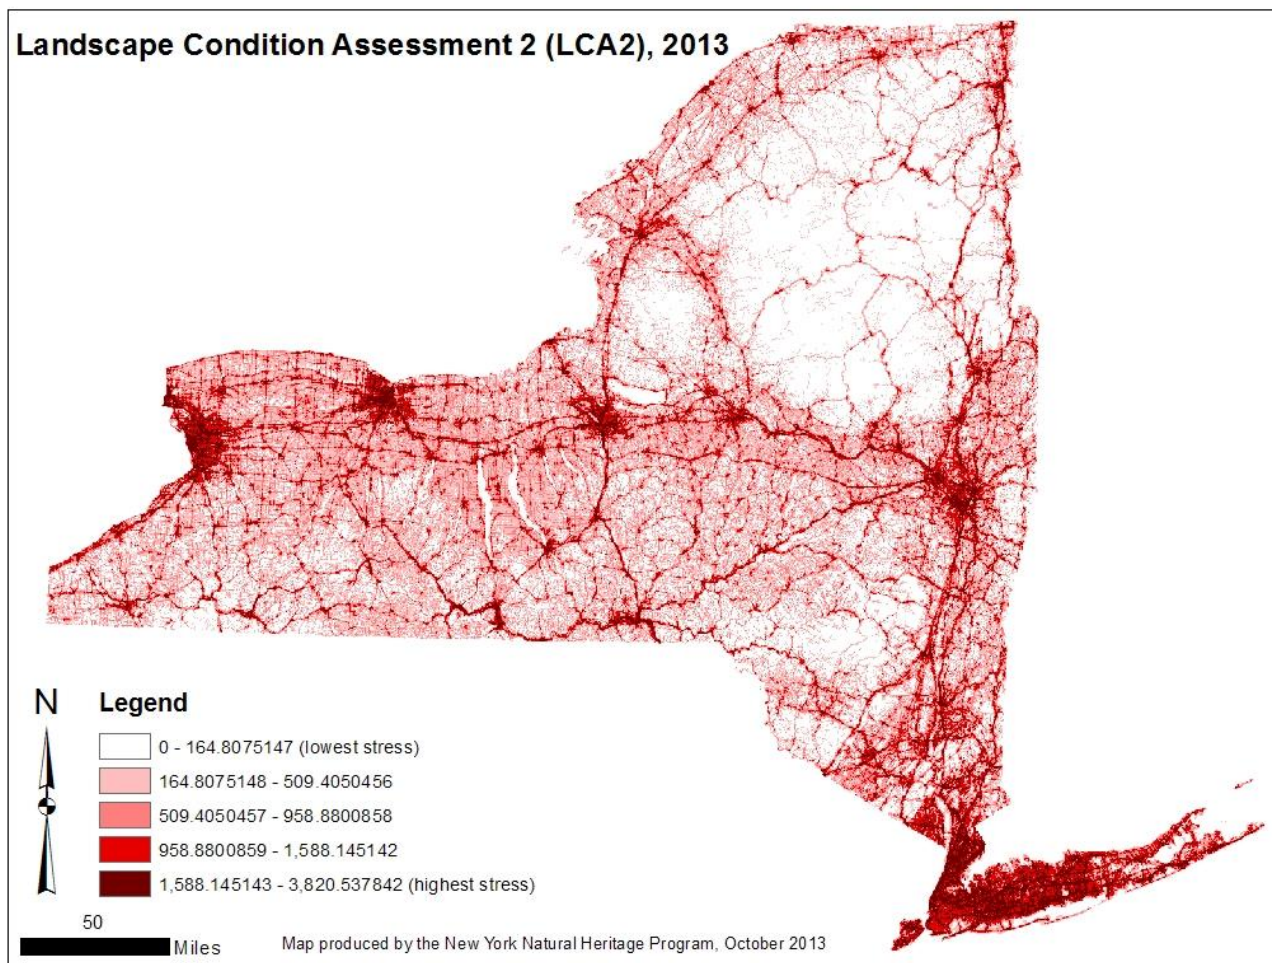

Landscape Condition Assessment

Input theme	Distance decay type	Decay dist.
Transportation		
Vehicle trails, 4-wheel drive	y1 (most abrupt)	50
Local, neighborhood, rural roads	y3	200
Secondary, connecting, special roads	y4	500
Primary highways, limited access	y5	1000
Primary highways, w/o limited access	y5	1000
Active rail lines	y2	100
Urban and Industrial Development		
High intensity development	y6 (most gradual)	2000
Medium intensity development	y4	300
Low intensity development	y4	300
Utility Corridors		
Electric transmission corridor	y2	100
Natural Gas corridor	y2	100
Land Use-Land Cover		
Cropland	y3	200
Open spaces	y3	200

Landscape Condition Assessment

Stack each component model and develop cumulative pixel scores

Comprehensive Score

Prioritizing Invasive Species Efforts

- What are the resources you are trying to protect?
 - ✓ Conservation
 - ✓ Recreation
 - ✓ Human health
 - ✓ Economy
- What impacts of invasive species do you need to mitigate?
- How do you decide where to start?

Where to control and survey for invasive species?

- Protected areas
- High conservation value
- Recreation destinations
- High economic value
- High risk areas
- Areas NOT yet heavily invaded

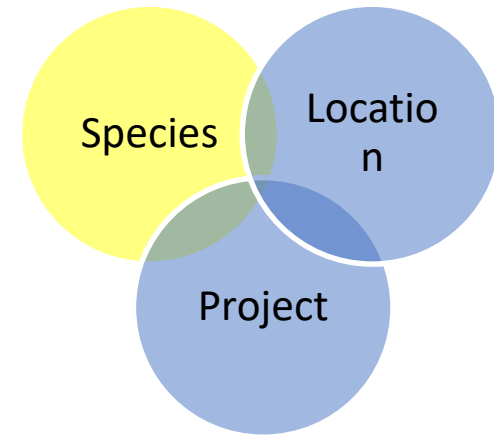

Which species to focus on?

Create list of target invasive species

For each species, consider:

- Invasiveness (look at NYS rankings)
- Impacts on the goals of the preserve/region
- Feasibility of control

High Impacts

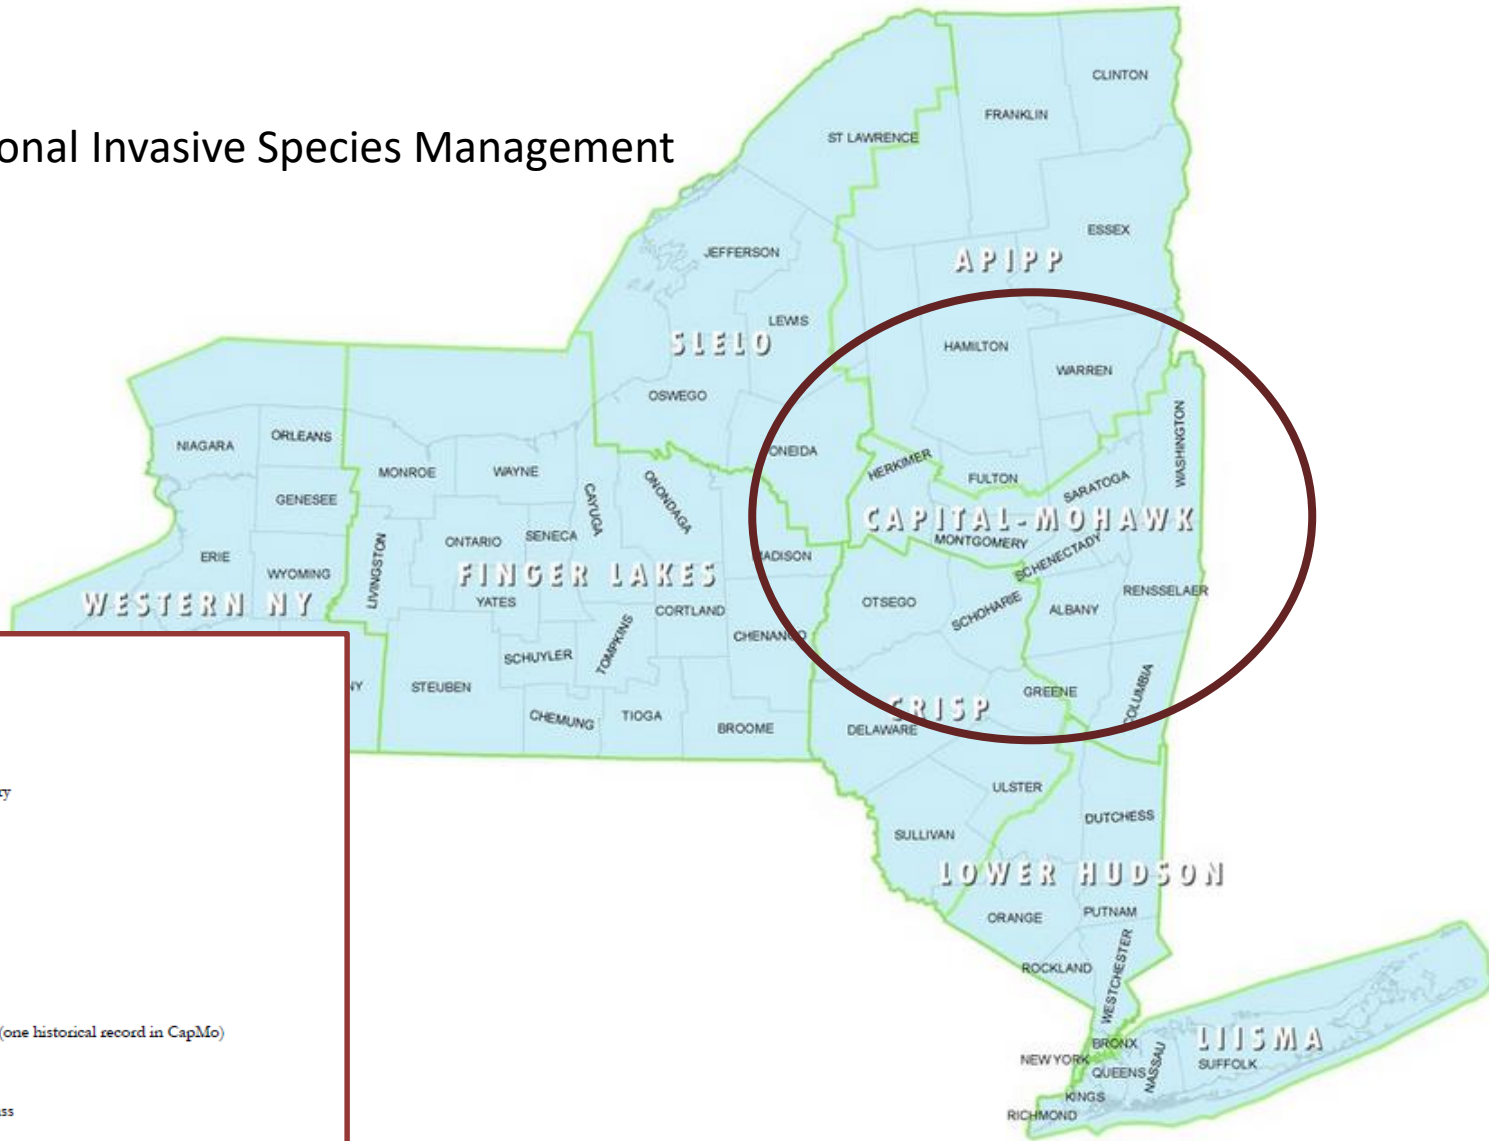

and

**Low Abundance
High chance of success**

PRISMs

Partnership for Regional Invasive Species Management

Terrestrial Invasive Plant Species:

Tier 1:

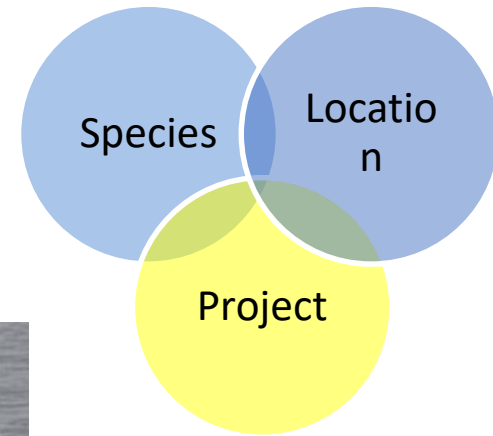

- 1a: *Actinidia arguta*, Hardy Kiwi, Tarvine
Actinidia polygama, Silver Vine
Ampelopsis brevipedunculata, Porcelain Berry
Aralia elata, Japanese Angelica Tree
Cytisus scoparius, Scotch Broom
Dioscorea polystachya, Chinese Yam
Lonicera maackii, Amur Honeysuckle
Pbelloidendron amurense, Amur Corktree
Pueraria montana var. lobata, Kudzu
Salix cinerea, Gray Floeists willow
Sabia glutinosa, Sticky Sage
Scoboenoplectus micronatus, Bog Bulrush (one historical record in CapMo)

- 1b: *Corydalis incisa*, Incised Fumewort
Oplismenus hirtellus, Wavyleaf Basketgrass

Tier 2

- Acer pseudoplatanus*, Sycamore Maple
Arthraxon hispidus, Small Caspgrass, Hairy Joint Grass, Jointh
Clematis terniflora, Japanese Virgin's Bower, Sweet Autumn
Eleutherococcus pentaphyllus, Five-leaf Aralia
Ficaria verna ssp. *Verna*, Lesser celandine, Fig Buttercup
Humulus japonicus, Japanese Hops
Lysimachia vulgaris, Garden Loosestrif, Yellow Garden Loosestrife

Which projects are most likely to succeed?

Using *iMapInvasives*

- Municipalities, organizations and groups can
 - Find invasive species in your area
 - Locate areas which should be prioritized by using the comprehensive score.
- Collect data, record management strategies and develop queries on your area.
